

SAVE TIME & MONEY!!

The MR-1 is a combination speaker locator and mud ring, with unique features that make it very useful & cost effective.

See the below diagram. Notice the score line between the two sets of mounting holes.

When used as a speaker locator, fastened to a truss, ceiling joist or wall stud (member), it should be positioned such that the score is aligned with the edge of the member so it may easily "snapped" off at such time a speaker is to be mounted.

After the sheetrock, but before a speaker is mounted, the small opening is covered by the MR-CVR. The MR-CVR has the aesthetically acceptable look of an electrical box cover waiting for a light or ceiling fixture.

Once the mud-rings are snapped off for speaker installations, the remaining piece should be salvaged and used for volume control or keypad locations.

Now your customers can save big money on rough-in kits and get all their volume control mud rings **FOR FREE !!!**

Combination Speaker Locator & Single Gang Mounting Ring
