

SE-80SWf

8" In-Ceiling / Wall Frameless Subwoofer

DESCRIPTION

Sleek and Powerful - The SE-80SWf is a heavy-duty, polypropylene 8" round in-ceiling or in-wall Subwoofer that features our new frameless design aesthetic for superior performance and ultra-low-profile integration. This highly musical low-frequency transducer utilizes a specially designed, shallow polypropylene cone for clean, powerful, low bass reproduction and an integrated, one-piece surround / damping ring to help minimize unwanted resonances in the woofer's mechanical substructure.

The SE-80SWf is supplied with both round and square grilles for greater flexibility in room design compatibility and aesthetics.

The low-profile grille is rattle-free, thanks to the 24 shaped-Neodymium magnets around the entire perimeter of the frame to hold it tightly in place - even during the playback of a Hollywood blockbuster movie soundtrack. Additionally, the grilles may be painted to match your decor.

For superior performance and room integration, we suggest using multiple SE-80SWf subwoofers (two, three or four), with one of our 500-Watt, Class A/B, Model 500 Amplifiers. This is NOT just to create more bass energy, but multiple subs greatly help minimize the low-frequency standing waves in ways a single subwoofer can't do alone. Simply put, multiple subs around the room generate more-uniform bass reproduction.

Model 500

SPECS/FEATURES

8" Round Frameless Subwoofer
Polypropylene Cone

Frequency Response:
30Hz - 120Hz

Sensitivity:
85 dB 1 watt / 1 meter

Power Handling:
100 watts nom. 150 max

Impedance: 4 ohms nominal

Grille: Magnetically-Attached
Micro-perforated stainless

Toggle Mounting System

Sold and Shipped Individually

DIMENSIONS

Overall Dimensions:
9-7/8" diameter

Cut-out Dimensions:
8-5/8" diameter

Mounting Depth: 3-7/8"

RoHS
conform
