

Convert Bezel to Frameless in 2 Easy Steps

An industry leader for 30 years, we see the market through the installer's eyes.

OEM's new BGR-6f and BGR-8f frameless baffles create opportunities:

- They create new sales opportunities
- They are catalysts for new levels of customer service
- Customers have greater flexibility of choice
- Installers can adapt to greater range of needs

The BGR-6f and 8f are frameless, custom-molded speaker baffles without speakers
 They fit every one of OEM's 6.5" and 8" in-ceiling speaker assemblies
 They accept OEM's 6.5" and 8" ultra-thin, frameless, magnetic grilles too

While unusual, speaker baffles without speakers can be unusually helpful. Here's why:

- 1 These 6.5" and 8" frameless baffles fit all of OEM's 6.5" and 8" ceiling speakers from OEM's ArchiTech Premium, ArchiTech Kevlar and Presence families.
- 2 All OEM's 6.5" or 8" ceiling speaker driver/xover assemblies are simple drop in's.
- 3 OEM's 6" and 8" round and square magnetic grilles fit perfectly.

VERSA-MOUNT™ Frameless Upgrade Process

BGR-6f and BGR-8f are GREAT solutions:

- Ideal "Place-holders" - when holes are pre-cut for future installs, they need to be covered cosmetically.
- Convert bezel-design speakers to today's sleeker frameless design.
- Creates upgrade path - less expensive speakers can be converted to pricier models.
- Enables builders to show multi-room preparation for actual installation later.
