

IW-101
"A" / "B" Switch

IW-303
Speaker A or B or
A+B Switch

IW-1SP1HJG
Headphone and/or
Speaker Switch

Speaker Switches can be used as a distribution point when multiple speakers are connected to an amplifier. This can reduce wiring clutter and offer a cleaner and more reliable installation. They are also useful for isolating areas of distributed sound. This can permit private listening and prevent disruption to offices or guest and children's rooms. Beyond these benefits, speaker switches can also help to protect the amplifier from damage by reducing or balancing the load. When it comes to choosing the right speaker selector for your system, feel free to call us with your questions.
