

Dual Source Impedance Matching Speaker Selectors

Pro-WIRE

The SLX series speaker selectors are equipped with the all new and revolutionary MB-4 wiring harness connection system, which has the following exclusive benefits:

- Positive connections that will not work themselves loose like the popular "spring clip" or "quick connect" types
- Dramatic time savings in installation and set-up
- Dramatic improvement in connection integrity—absolutely superior quality terminations
- Performance improvement
- Makes troubleshooting system connections extremely quick and easy

Each model in the SLX series includes 120 high quality pre-printed labels that slip into the label channel above the room switches.

These high quality labels are named with nearly every conceivable room or area name indoors and outdoors for both residential and commercial use, making these units highly adaptable and user friendly.

Model	Quantity of MB-4 included	Speaker Pairs	RMS Power Handling	A/B Source Switching	Dimensions	Net Weight	Design
SLX-4	1	4	125 Watts / Channel	YES	8 1/2" W x 2 5/8" H x 9" D	3.6 lb	Resistor
SLX-8	2	8	150 Watts / Channel	YES	17" W x 3 5/16" H x 9 3/8" D	12.3 lb	Autoformer
SLX-12	3	12	150 Watts / Channel	YES	17" W x 3 5/16" H x 9 3/8" D	12.6 lb	Autoformer

Lifetime Limited Warranty

SLX-4 SLX-8 SLX-12

Dual Source Impedance Matching Speaker Selectors

The SLX-4 (top) includes (1) MB-4
The SLX-8 (middle) includes (2) MB-4s
The SLX-12 (bottom) includes (3) MB-4s

Each MB-4 provides connections for 4 pairs of speakers.

The MB-4 wiring harness is approximately 4' in length. It is terminated on one end with a 16 conductor molded nylon locking connector and 16 high-grade gold plated banana plugs on the other end.

The molded nylon connector snaps and locks into the rear panel of the SLX speaker selector providing a positive connection for all 16 conductors. These connections are not subject to "working loose" or becoming loose from minor movement such that these type devices are subjected to from routine dusting (house cleaning).

The 16 gold banana plugs are clearly labeled to facilitate organized and confusion-free connections to the "head-out". The head-out is the point where the speaker wires transition into the wall and make their way to the volume controls and speakers.

The SLX-4 includes one (1) MB-4 appropriately labeled for speaker pair numbers 1-4, the SLX-8 includes a second MB-4 labeled 5-8 and the SLX-12 includes a third MB-4 labeled 9-12.

The banana plugs of the MB-4 wiring harness plug directly into industry standard banana jacks or "5-Way" binding posts for a very professional and attractive finished look.
